Introduction Engineers familiar with steel charged with designing an aluminium structure are faced with two particularities. The first is the large number of alloys combined with the different so called tem-pers which are available.

Most aircraft structural components are fabricated from thin metal sheet, so that stresses across the thickness of the sheet are usually negligible. Assuming, say, that the z axis is in the direction of the thickness, then the three-dimensional case of Section 1.3 reduces to a two-dimensional case in which s_z , t_{xz} , and t_{yz} are all zero. This ...
