quality water is an indispensable feature for preventing diseases and improving quality of life. It is necessary to know details about different physico-chemical parameters such as color, temperature, acidity, hardness, pH, sulphate, chloride, DO, BOD, COD, alkalinity used for testing of water quality.

The physical parameters of water quality can be broken down into many topics such as turbidity and taste or odor to name a few. But one needs to also take into consideration the nature of the physical parameters of the ecosystem surrounding a water source to also understand the physical appearance of a later finished water.
